

Ondupack Orders C190 Baysek Die Cutter

“The multiple-out C190 is the perfect machine for our business model in the industrial and agricultural sectors,” says Fernando Javier Tolosa Perez, Director General at Ondupack.

“The new line will enable Ondupack to provide better service and quality for our customers. This new machine will open up brand new industries for us to explore and grow into.”

Manufactured in the USA, the Baysek C190 requires only one operator to run the machine. A full stack of sheets is fed into the machine and processed, with the nick-free finished die-cut parts exiting the machine, counted and stacked ready for immediate shipping.

This saves both time and additional labor costs, as no further handling is required, unlike some other machines on the market. The C190 can process and die-cut all grades of corrugated from single face up to double wall and solid board.

“It was a pleasure to spend some time with the Ondupack team in the Netherlands and build the start of a long-lasting relationship for many years to come,” says Robert Jess, Sales Manager of Baysek Machines.

“24-hour worldwide customer service and after-sales support is at the heart of Baysek, and we are looking forward to seeing what Ondupack will achieve with their new machine. The C190 is scheduled for delivery in August 2024.”

Founded in 1996, Ondupack has established itself as a leader in the corrugated cardboard industry. With facilities spanning 48,000 m², Ondupack boasts an impressive production capacity of 125 million square meters of corrugated cardboard, equivalent to approximately 400 million boxes per year. The company employs over 150 staff and generates an annual turnover of €75 million, serving more than 1500 customers.
